EPiServer Module:	EPiServer version 4.5 or later, .NET Framework 3.0 or later and SQLServer 2005.

Licensing FAQ

TMCore Licensing

What does my license for TMCore cover ?

The TMCore license allows you to install our database schemas on one server or cluster of servers. The license also enables you to install all binaries and web services on any number of other machines, as long as they all connect to the single licensed database server.

Can I install the TMCore Web Services on multiple front-end web servers ?

Yes, as long as they all connect back to the same licensed database server (or server cluster).

Can I install the schema in multiple databases on the same database server ?

Yes. There is no limit on the number of separate databases you host on the same database server using our schemas.

Can I install a replicated staging or test environment ?

To install a replicated server for staging, or test you will need to purchase licenses under the Replicated Solution Discount Scheme (see below).

EPiServer Module Licensing

What does the EPiServer Module License cover ?

The EPiServer Module license allows you to install the module on a single EPiServer installation. The EPiServer Module Lite Edition is licensed for use only with the EPiServer Professional License. The EPiServer Module Full Edition is licensed for use with any version of EPiServer.

What other differences are there between the Lite and the Full versions of the EPiServer Module ?

The price of the EPiServer Module Lite Edition includes a cut-down version of TMCore which does not support faceted search. A separate TMCore license is not required for the EPiServer Module Lite Edition.

SharePoint Module Licensing

What does the SharePoint Module License cover ?

The SharePoint Module license allows you to install the TMCore SharePoint Module on a single SharePoint front-end server or SSP. You will require one SharePoint Module license for each front-end server / SSP in the SharePoint server farm. Licensing is per-machine, so if you have a single machine running as both front-end server and SSP, only one license is required.

Can I use this product with Windows SharePoint Services ?

Yes. However there are a number of features which are specific to the Microsoft Office SharePoint Server.

Can I use this product with multiple WSS sites or MOSS servers ?

Yes, as long as the installations all use the same TMCore database server.

Replicated Solution Discount Scheme

What is the Replicated Solution Discount Scheme ?

The Replicated Solution Discount Scheme enables you to purchase licenses for the replication of a production environment for staging, testing or QA purposes. The discounted license costs just 30% of the license cost for the production environment. In addition, no maintenance is due on the discounted licenses issued under the Replicated Solution Discount Scheme.
